

How Your First Nine Months Shapes the Rest of Your Life

TUESDAY, APRIL 26 @ 7:00 P.M.

**Providence-Providence Park, Novi, Conference Room A (Heart Institute Entrance)
47601 Grand River Ave, Novi**

The importance of comprehensive and timely prenatal care has been known for many years, yet in the United States, only 7 in 10 pregnant women receive adequate prenatal care. Inadequate care is not only detrimental to the mother, but can lead to complications for the baby that could impact their adult life. Join Dr. Richard Leach at this Your Health Lecture to learn about the startling science that supports the fetal determinants of adult disease, Tuesday, April 26, at 7 p.m., at Providence-Providence Park, Novi.

The Your Health Lecture Series is a collaborative community event sponsored by Providence-Providence Park, Novi and Michigan State University College of Human Medicine.

Richard Leach, MD, FACOG, FACS

*Professor and Chair of the Department of Obstetrics, Gynecology and Reproductive Biology
Michigan State University College of Human Medicine*

Richard Leach, MD, FACOG, FACS, is professor and chair of the Department of Obstetrics, Gynecology and Reproductive Biology at Michigan State University College of Human Medicine. Dr. Leach is board certified in obstetrics and gynecology with subspecialty certification in reproductive endocrinology and infertility. He is a fellow in the American College of Obstetrics and Gynecology, the American College of Surgeons and the American College of Clinical Endocrinologists. Dr. Leach serves on several national committees as an expert on in vitro fertilization (IVF), including the Society of Assisted Reproductive Technologies. With support from the National Institutes of Health, Dr. Leach studies how early implantation can cause infertility.
